

I find that your proposals regarding BPL are blind to the established facts regarding interference TO licensed operations -- and your proposals ignore (permitted) likely interference BY licensed operations to BPL signals.

Of course, signals emitted by BPL transmitters will be low. Why do you ignore the OBVIOUS fact that the field strength of these nearby signals will be stronger than those of other signals received from some distance away?

It appears that commercial interests have overtaken fact and good common sense. I strongly urge that you stop this action and eliminate this (BPL) monster before it is loosed on the public.
